G6 Cabinet IR

The G6 provides a total of 22 cabinet emulations of all modeling amps. Cabinet Simulations offer the sonic response of each amp's cabinet when using G6 connected to a real amplifier.

In addition, G6 provides 70 pre-loaded full spectrum impulse response (IR data) of the cabinets that were captured by placing the microphone in three different positions. Each cabinet has a recording where the mic was placed 1-inch away (2.5cm approx.), a recording where the mic was placed 12-inches away (30cm approx.), and one where the mic was placed in the room.

IR Data offer a full variety of sonic responses when using the G6 connected via DIRECT OUT to a PA or monitor system..
